

ADRIAN BELTRAN

Software & Cloud Infrastructure Engineer — Computer Engineering Student

Mexico City, Mexico (GMT-6) — contact@iamabeltran.com — iamabeltran.com
github.com/iamabeltran — linkedin.com/in/iamabeltran

PROFESSIONAL SUMMARY

Software Engineer with 7+ years of practical programming experience backed by a solid technical foundation. Specialized in backend development, Software-Defined Networking (SDN), Linux systems, and secure cloud operations. Proven track record in algorithmic optimization, automation, and designing scalable network topologies. Fully bilingual with advanced English skills certified at the C1.1 level, prepared for agile collaboration in global engineering teams.

EDUCATION

B.S. in Computer Engineering (Graduation Candidate) 2020 – Dec 2026
Universidad Autónoma Metropolitana (UAM Azcapotzalco) Mexico City, Mexico

- Focus on Systems Engineering, Computer Networks, Distributed Infrastructure, and Advanced Data Structures. Enrolled in 20-O term.
- Cumulative Academic GPA: 8.06 / 10.0 (Eligible for postgraduate programs and top-tier technical roles).

Technical Degree in Software Programming 2017 – 2020
CECyT 9 “Juan de Dios Bátiz” – Instituto Politécnico Nacional (IPN) Mexico City, Mexico

- Early specialization in Object-Oriented Programming (OOP), logical system design, and relational databases.

TECHNICAL PROJECTS & HIGHLIGHTS

SDN Routing Benchmarking & Topology Emulation 2026
UAM Azcapotzalco Integration Project

- Designed and deployed virtualized Software-Defined Network (SDN) topologies using **Mininet** and **Python** scripts to benchmark convergence and latency between OSPF and RSTP routing protocols.
- Automated packet metric collection, accelerating testing cycles and benchmarking protocol performance under simulated heavy traffic.

Secure Cloud Deployment & Serverless Architecture 2026
Production Web Infrastructure (iamabeltran.com)

- Migrated production web infrastructure to **Cloudflare Pages** with automated CI/CD deployment pipelines.
- Configured edge security policies, custom DNS routing, and automated threat mitigation using Cloudflare’s Web Application Firewall (**WAF**).

Algorithmic Optimization & Data Structures Repository Ongoing
Open-Source Technical Portfolio

- Refactored complex algorithms, optimizing execution time complexity from $\mathcal{O}(N^2)$ to linear time $\mathcal{O}(N)$ using Hash Maps, Two Pointers, and efficient memory structures in **Python**.

TECHNICAL SKILLS

Languages: Python, Java, C, C++, JavaScript (JS), SQL, Bash
Cloud & Infrastructure: Cloudflare (Pages, WAF, DNS), Linux (Ubuntu/Debian), Git, CI/CD Pipelines
Networking & SDN: Mininet, SDN Controllers, OSPF, RSTP, TCP/IP, Socket Programming
Databases & Tools: PostgreSQL, MySQL, VS Code, Postman, $\text{\LaTeX}$

LANGUAGES & CERTIFICATIONS

English: Advanced C1.1 – Certified by **goFluent** (Full Professional Proficiency) — **Spanish:** Native Speaker
